**Arc Limited is one of North America's leading manufacturers of Glass Fiber Reinforced Concrete (GFRC) architectural castings.**

Lightweight, durable and providing tremendous design flexibility, GFRC is often used in commercial construction for non-structural architectural components such as wall panels, window spandrels, façades, column covers, window headers, fountains, balustrades, cornices and artistic masonry forms and shapes. Replication of natural stone in a variety of color and textures is possible when GFRC is specified. GFRC technology is also widely recognized as a superior alternative to imported terra cotta stone for use in historical replication where reproducing elements and achieving an aged appearance is required.

Arc is within a day's drive to locations throughout the Eastern United States. We are located in Leetsdale in the Greater Pittsburgh Area at a newly renovated 50,000 square foot production facility with access to an additional 60,000 square feet for extra-large projects.

**Johnson**screens®

Johnson Screens designs and manufactures many types of architectural screens that can be specialized to suit most projects. The ornate-yet-structural quality of an architectural screen can be used in countless ways, including:

- Blast Resistance
- Column covers
- Custom lighting
- Exterior applications
- Interior applications
- Grating
- Wall cladding
- More...

Our screens are designed and engineered to satisfy the requirements of your application. We will work with you from concept to delivery, ensuring top quality products and services.

Formerly illbruck acoustic, inc. pinta acoustic specializes in manufacturing noise control and acoustical products for the architectural, broadcast/audio, industrial and facilities markets. Whether it is reverberation control or sound absorption, in areas large or small, pinta acoustic's products deliver excellent acoustical performance

## **Architecture**

pinta acoustic's architectural products provide unlimited design options and exceptional sound control. Our products are made from a variety of class 1 fire-rated materials such as melamine foam, recycled steel and wood .

## **Broadcast/Audio**

SONEX® acoustic products have been the solution for decades in designing acoustically ideal sound stages, studios, control rooms or listening rooms under many challenging conditions.

## **Industrial Noise**

SONEX Panels, Baffles and Curtains reduce overall noise and control reverberation in factories, processing plants and other industrial settings by trapping and dissipating sound waves.

## **Facilities**

Virtually every type of interior space needs some type of acoustical control to ensure the comfort and safety of the people who will spend time there. For example, even the most well-designed office will be...

## Our current line of products:

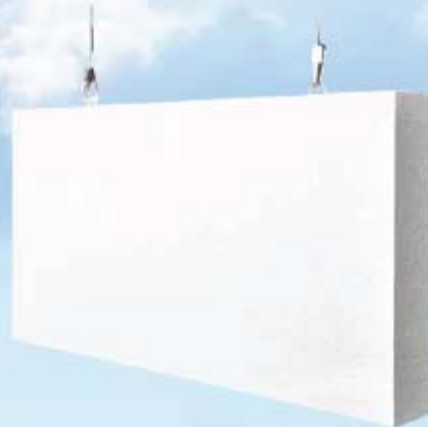

**Aura** – Custom acoustical ceiling panels manufactured in any geometric, curved or complex shapes. Mounting systems include Aptus, a custom aluminum suspension grid system, which is a completely concealed torsion spring ceiling system. The system features a 1/8' defined joint with 100% downward accessibility for easy access to the plenum.

**SuperCluster** – Acoustical clouds and shapes. A collection of various sizes of flat or pre-curved acoustical clouds and shaped panels. Custom shapes and sizes are also available

**Baffles** – reduce the background noise and quickly decays the sound energy, thus enhancing the auditory environment in the space.

**Stratus** – Commercial ceiling panels. Standard sizes of ceiling panels (2' x 2', 2' x 4', etc.) are designed for the standard ceiling layouts and mounted in a T-Bar grid system. Custom sizes available.

**Nexus** – Acoustical and Hi-Impact Resistant panels can be customized in various sizes, shapes, and curves, finished with the customer's choice of fabric or paint.
